

1 35題

$$f(x) = x^3 - 6x^2 + 9x - 1$$

$$\begin{aligned} f'(x) &= 3x^2 - (2x + 9) \\ &= 3(x^2 - 4x + 3) \\ &= 3(x-1)(x-3) \end{aligned}$$

$$f'(x) = 0 \text{ の解 } x = 1, 3$$

x	..	1	..	3	..
f'	+	0	-	0	+
f	\nearrow	3	\searrow	-1	\nearrow

iii) $x=0$ のとき

$$f(t) = f(t+1) \text{ で } t+1 = 0 \Rightarrow t = -1.$$

$$f(t) = t^3 - 6t^2 + 9t - 1.$$

$$f(t+1) = (t+1)^3 - 6(t+1)^2 + 9(t+1) - 1.$$

$$f(t) = f(t+1)$$

$$\Leftrightarrow 0 = (2t^2 + 3t + 1) - 6(2t + 1) + 9$$

$$\Leftrightarrow 2t^2 - 9t + 4 = 0$$

$$t = \frac{9 \pm \sqrt{81 - 48}}{6}$$

$$= \frac{9 \pm \sqrt{33}}{6}$$

∴ $t \geq -2$.

$$\therefore t = \frac{9 + \sqrt{33}}{6}$$

(5×4)

$$\begin{aligned} \text{i)} \quad t+1 < 1 &\text{ i.e. } t < 0 \text{ かつ } \\ x &= t+1 \text{ なら } \\ M(t) &= f(t+1) \\ &= (t+1)^3 - 6(t+1)^2 + 9(t+1) - 1 \\ &= t^3 + 3t^2 + 3t + 1. \\ &\quad - 6t^2 - 12t - 6 \\ &= t^3 - 3t^2 + 3. \end{aligned}$$

ii) $t < 1 < t+1$

i.e. $0 < t < 1$ かつ

$$x = t \text{ なら } M(t)$$

$$M(t) = f(t)$$

$$= 3.$$

$$\text{iii) } 1 < t+1, \quad t < \frac{9+\sqrt{33}}{6} \text{ かつ}$$

i.e. $1 < t < \frac{9+\sqrt{33}}{6}$ かつ

$$x = t \text{ なら } M(t)$$

$$M(t) = f(t)$$

$$= t^3 - 6t^2 + 9t - 1.$$

$$\text{iv) } \frac{9+\sqrt{33}}{6} < t \text{ かつ}$$

$$x = t+1 \text{ なら } M(t)$$

$$M(t) = f(t+1)$$

$$= t^3 - 3t^2 + 3.$$

7.2

$$M(t) = \begin{cases} t^3 - 3t^2 + 3 & (t < 0, \frac{9+\sqrt{33}}{6} < t) \\ 3 & (0 \leq t \leq 1) \\ t^3 - 6t^2 + 9t - 1 & (1 < t \leq \frac{9+\sqrt{33}}{6}) \end{cases}$$

2

35点

$$(6-m)^3 = 2 \cdot 3^3$$

$$6-m = 3 \cdot \sqrt[3]{4}$$

$$\therefore m = \frac{6 - 3\sqrt[3]{4}}{4} \quad 5$$

解： y 軸由 $y = -x(x-6)$ 得 x 軸

部分面積は

$$\begin{aligned} S_1 &= \int_0^6 -x(x-6) dx \\ &= \frac{1}{6} \cdot 6^3 = 36. \quad 185 \end{aligned}$$

題意より y 軸から x 軸、上図の部分面積 S_1 が δ である。

$$S_1 = (\delta - 2\pi r^2) \cdot (-\alpha) \quad \text{題意} \quad 5$$

$$y = -x(x-6) \sim y = mx \quad \alpha \text{ が直角の } x \text{ 座標。}$$

$$-x(x-6) = mx$$

$$x(x-6) + mx = 0$$

$$x(x - (6-m)) = 0.$$

$$x=0, 6-m. \quad \text{共解} \quad 5$$

$$\therefore S_1 = \int_0^{6-m} \{-x(x-6) - mx\} dx \quad \text{145} \quad 5$$

$$= \int_0^{6-m} -x(x - (6-m)) dx$$

$$= \frac{1}{6} \cdot (6-m)^3 \quad \text{145} \quad 5$$

式12)

$$\frac{1}{6} (6-m)^3 = 18$$

$$(6-m)^3 = 6 \cdot 18$$

43. ($y = x^2 - 1$) ⑤ 4,4

3

$$y = |x^2 - 1| \text{ の } x > 0 \text{ の下図}.$$

求める図形の面積S.

$$y = |x^2 - 1| \approx y = \frac{1}{2}x^2 + k$$

この図形の面積を求める。

$$(\because \text{面積} = \int_{-1}^1 |x^2 - 1| dx)$$

軸対称: 1つの範囲が2倍の面積.

$$y = (x^2 - 1)$$

求める面積は図の2倍で $S, \rho \in \mathbb{R}^+$.

ここで $\rho = \sqrt{x}$.

$$-\rho(x-2) = \frac{1}{2}\rho x$$

$$\rho(x-2+\frac{1}{2}) = 0$$

$$\rho = 0, 2 - \frac{1}{2}$$

$$\therefore d = 2 - \frac{1}{2}$$

(ii) $\rho = \sqrt{x}$

$$\rho(x-2) = \frac{1}{2}\rho x$$

$$\rho(x-2-\frac{1}{2}) = 0$$

$$\rho = 0, 2 - \frac{1}{2}$$

$$\therefore \rho = 2 - \frac{1}{2}$$

$$S = \int_0^{\rho} y dx - \left(\int_0^{2 - \frac{1}{2}} y dx \right) - \left(\int_0^{\rho} y dx \right)$$

① ② ③

$$\begin{aligned} ① &= \int_0^{\rho} \left(\frac{1}{2}\rho x - \rho(x-2) \right) dx \\ &= \int_0^{\rho} -\rho(x-\frac{1}{2}\rho) dx = \frac{1}{6}\rho^3 \end{aligned}$$

$$② = \int_0^{2 - \frac{1}{2}} -\rho(x-2) dx = \frac{1}{6} \cdot 2^3 = \frac{4}{3}$$

$$\begin{aligned} ③ &= \int_0^{\rho} \left(-\rho(x-2) - \frac{1}{2}\rho x \right) dx \\ &= \int_0^{\rho} -\rho(x-\frac{1}{2}\rho) dx = \frac{1}{6}\rho^3 \end{aligned}$$

$$\begin{aligned} \therefore S &= \frac{1}{6}\rho^3 - 2 \cdot \frac{4}{3} + 2 \cdot \frac{1}{6}\rho^3 \\ &= \frac{1}{6}(\rho^3 + 2\rho^3) - \frac{8}{3} \end{aligned}$$

$$\begin{aligned} \therefore \rho^3 &= \rho^3 - 12k^2 + 6k^2 - \frac{1}{2}k^3 \\ \rho^3 &= \rho^3 + 12k^2 + 6k^2 - \frac{1}{2}k^3 \end{aligned}$$

$$\begin{aligned} \therefore \rho &= \frac{1}{6}(14 - 12k^2 + 18k^2 - \frac{1}{2}k^3) - \frac{4}{3} \\ &= -\frac{1}{6}k^3 + 3k^2 - \frac{1}{2}k - \frac{4}{3} \end{aligned}$$

$$\rho' = -\frac{1}{2}k^2 + 6k - 2$$

$$= -\frac{1}{2}(k^2 - 12k + 4)$$

$$k = 6 \pm 4\sqrt{2}, \text{ ただし } k > 0$$

$k = 6 + 4\sqrt{2}$	$k = 6 - 4\sqrt{2}$
$\boxed{-}$	$\boxed{+}$
$\boxed{1}$	$\boxed{0}$
$\boxed{2}$	$\boxed{-}$
$\boxed{3}$	$\boxed{0}$
$\boxed{4}$	$\boxed{-}$

$$\boxed{k = 6 + 4\sqrt{2} \approx 11.4 \text{ m.}}$$

2025の面積は...

$$\rho = 6 - 4\sqrt{2} \Leftrightarrow k^2 - 12k + 4 = 0^2$$

$$\rho = -\frac{1}{6}k(k-12) + 7((k-6)^2) = \frac{4}{3}k^2 - \frac{4}{3}$$

$$= -2k^2 + \frac{2}{3}k + 36k - 12 - 2k^2 + \frac{4}{3}$$

$$= -2((k-6)^2) + \frac{2}{3}k + 34k = \frac{32}{3}$$

$$= \frac{32}{3}k - \frac{8}{3}$$

$$= \frac{8}{3}(4k-1)$$

$$= \frac{8}{3}(24 - 16\sqrt{2} - 1)$$

$$= \frac{8}{3}(23 - 16\sqrt{2})$$
